

Contracts drafted together. Funds protected on-chain.

TrustLedger combines encrypted contract drafting, optional live co-editing, EVM escrow, juror arbitration, reputation, and notifications into one open-source workflow for clients and freelancers.

1. Draft safely

Encrypted links share terms first; live rooms are opt-in.

2. Fund escrow

ETH or ERC-20 funds move through auditable contract paths.

3. Resolve fairly

Approvals, warranties, ratings, and juror disputes stay traceable.

Encrypted collaboration

Server relay stores ciphertext only. Keys stay with users.

Multi-chain foundation

Sepolia-first EVM stack with Base, Optimism, Arbitrum config.

Strict engineering

React Doctor, Jest, Playwright, Foundry, Docker, Kubernetes.
