

FREELANCE SERVICE AGREEMENT

Escrowed and arbitrated via TrustLedger — Ethereum Sepolia testnet
DEMO DOCUMENT — not a legally binding contract. Fictional parties and values.

Agreement ID	TL-DEMO-0001
Effective Date	May 26, 2026
Client	Acme Web Co. (0xC1ie77000000000000000000000000000000A1)
Freelancer	Jordan Rivera (0xF7ee1a9c000000000000000000000000000000B2)
Escrow Amount	1.00 ETH
Arbitration Fee	5% (held only if a dispute is opened)
Warranty Hold-Back	10% for 30 days after approval
Acceptance Window	48 hours after work submission

1. Scope of Work

The Freelancer shall design and develop a responsive marketing landing page for the Client, comprising: (a) one desktop and one mobile layout; (b) a hero section, three feature blocks, a pricing table, and a contact form; (c) integration of the Client-supplied brand assets; and (d) deployment-ready source files. All deliverables shall be original work and free of third-party license encumbrances.

2. Payment & Escrow

The Client shall lock the full Escrow Amount of 1.00 ETH in the TrustLedger smart contract upon creation of this agreement. Funds are released to the Freelancer automatically upon Client approval, or via decentralized juror arbitration in the event of a dispute. No platform fee is charged; the arbitration fee is collected only if a dispute is opened and is paid to the jurors who resolve it.

3. Delivery & Acceptance

Upon completion, the Freelancer submits proof of work on-chain. The Client then has 48 hours to approve or dispute the deliverable. If the Client takes no action within this window, the contract auto-releases the funds to the Freelancer (anti-ghosting protection).

4. Dispute Resolution

Should either party dispute the outcome, a panel of randomly selected, staked jurors evaluates the deliverable and votes on a completion percentage via a commit-reveal process. The median vote becomes the ruling, and the escrowed funds split proportionally between the parties.

5. Warranty Hold-Back

10% of the Escrow Amount is withheld for 30 days following Client approval. If a defect is identified during this period, the Client retains leverage to seek remediation. After the warranty period elapses, the Freelancer may claim the held-back amount.

6. Integrity of This Document

The keccak256 hash of this document is recorded on-chain at contract creation, and the file is pinned to IPFS. Any modification — even a single character — alters the hash and will not match the value stored on-chain. Both parties therefore hold cryptographic proof of the exact terms agreed.
